

## ABSTRACT

An emulsion composition comprises a graft  
5 copolymerized emulsion obtained by adding a monomer or  
monomeric mixture containing at least 70% by weight of a  
(meth)acrylic monomer to an oil-in-water type emulsion  
containing an organopolysiloxane having an organic group  
containing a radical reactive group or SH group, and  
10 effecting emulsion graft polymerization of monomer to  
organopolysiloxane. The emulsion composition is capable of  
forming an elastic, flexible coating having weather  
resistance, water resistance, water repellency, adhesion and  
heat resistance and maintaining these properties over a long  
15 period of time, and thus suited for building materials.
